Introduction & Background

Regulatory Compliance is a specialized field that requires specialized expertise. Just as you need a geomatics company for your surveys, land agents for public consultation and engineering firms for design and construction, so should you also have the necessary expertise for regulatory compliance.

Numerous companies operating in BC have received enforcement action from the OGC –*do not be one of them.*

Whether you are with a small explorer or international oil & gas producer, your company can not afford the risk of non-compliance and the penalties that ensue. Shut-in of production, stop work orders and delays in obtaining approvals can cost millions of dollars.

Approximately 30% of all oil & gas infrastructure is in non-compliance with the OGC. These non-compliances range from meters not being calibrated to operating oil and gas facilities without the necessary approvals. Eclipse can ensure you become 100% compliant.

The OGC conducts audits on a risk-based system similar to the OSI system in Alberta. The OGC believes that meeting or exceeding regulations is a basic responsibility for industry. Industry is expected to understand all requirements that apply to their business and have infrastructure in place to ensure compliance. Over the past few years, the OGC has recruited additional staff to ensure the increase in activity is monitored accordingly.

In the last three years Eclipse has conducted over 75 audits and inspections of oil & gas facilities and pipelines in BC. Sites where non-compliances were identified and self-disclosed had no enforcement action taken. In contrast, enforcement action was initiated for almost 100% of non-compliances identified by the OGC.

You can have confidence in your regulatory compliance knowing that Eclipse will:

- Identify existing non-compliances and gaps
- Ensure you avoid enforcement action by self-disclosing non-compliances to the OGC
- Ensure any future enforcement action is avoided through our ongoing maintenance program

Eclipse will ensure compliance with any pertinent legislation within the Province of BC's jurisdiction.

COMPLIANCE MANAGEMENT

Eclipse provides you with professional, expert consultation to help manage your regulatory needs.

Our Compliance Management services include:

- Inspections and Audits
- Self-Disclosure Coordination
- Regulations Review Gap Analysis
- KERMIT Data Grab Program
- Procedural Review
- Providing an Ongoing Maintenance Program

Licensing and Operations Audit

Eclipse will utilize our customized “**Facility and Pipeline Compliance Audit Checklist**” to conduct a complete inspection for selected wells, pipelines and facilities. These checklists identify all requirements as per the OGC's Inspection and Compliance Operations Manual along with applicable regulations from all other governing regulatory bodies.

Once we have identified any and all non-compliances, the results will be stored and recorded for each well, pipeline and facility. Eclipse will prepare a detailed report identifying all existing non-compliances and provide recommendations for achieving compliance.

In addition, Eclipse will coordinate the self-disclosure to the OGC and any other governing bodies until the non-compliance is corrected and an action plan is implemented to ensure future non-compliances do not occur.

Regulations Review

Eclipse has compiled a proprietary list of all potential non-compliances associated with all relevant Acts and Regulations in BC. In order to achieve compliance we must first ensure that you are aware of all the potential non-compliances that could affect your company's operations and assign accountability and responsibility for each. A complete review of all existing processes and procedures is required to determine if compliance would be achieved when followed by the designated personnel.

Eclipse will prepare a detailed report identifying any gaps in the existing accountability matrix and the existing processes and procedures.

Compliance Maintenance

In order to maintain 100% compliance there must be one central driver for all applicable regulatory items. Eclipse will utilize our customized tools to ensure ongoing compliance with respect to monitoring and reporting, licensing maintenance, operations maintenance, MOCs, scheduling and self-disclosures.

Cost Management

Costs for each project type will be on a previously approved basis. This will allow your company to budget accurately for each project with the assurance that the regulatory costs will be identical for each similar type project.

Eclipse provides a 100% guarantee on *all* our services.
