Introduction & Background

The vast majority of oil & gas activity in Northeastern British Columbia are pre-designed wellsites and associated pipelines which require very little engineering once the company has decided on a typical wellsite design. The successful completion of these projects relies predominantly on the effective navigation through the Oil and Gas Commission (OGC) regulatory process.

Numerous companies operating in BC recently received enforcement action from the OGC – *do not be one of them*. Whether you are with a small explorer or international oil & gas producer, your company can not afford the risk of non-compliance and the penalties that ensue. Shut-in of production and delays in obtaining approvals can cost millions of dollars.

The licensing and permitting process through the OGC continues long after the approval for construction is obtained. Ensuring that all requirements of the OGC have been met requires in-depth **knowledge** of the regulations, **discipline**, **coordination** and **efficiency**.

Eclipse has helped its clients navigate Provincial and Federal oil & gas regulations for over ten years. Our professional consultants offer over 100 years of combined experience with more than 500 successful OGC applications and amendments.

You can have confidence in your regulatory compliance knowing that Eclipse will:

- ☒ Determine when applications, approvals and notices are required
- ☒ Ensure that your applications are not declined
- ☒ Ensure all your notices are submitted as required

Our years of quality work and perfect compliance record have led to a professional relationship with the Oil and Gas Commission (OGC) that has culminated into expedited approvals for our clients.

Eclipse will ensure compliance with any pertinent legislation under the OGC's jurisdiction.

LICENSING MANAGEMENT

Eclipse provides you with professional, expert consultation to help manage your regulatory needs.

Our Licensing Management services include:

- ☒ Application Requirements and Preparation
- ☒ Amendment Submissions
- ☒ Evaluating Upstream and Downstream Effects
- ☒ Expediting Approvals
- ☒ Preparing and Coordinating Self-Disclosures
- ☒ Providing an Ongoing Maintenance Program

Drawing Preparation

Eclipse will prepare all drawings required for each phase of your project (IFA, IFC, As-builts). These drawings will typically include P&IDs, Plot Plan and a Gathering System Schematic. Eclipse will provide engineering review of typical drawings prior for use on multiple wellsites, engineering sign-off and stamping of as-built drawings by a Professional Engineer.

Application Requirements & Expediting Your Approvals

By utilizing our customized “**Oil and Gas Commission Application Matrix**”, we will determine the required applications for all proposed projects and prepare the necessary applications in accordance with current regulations, guidelines and acts.

Through our internal “**Licensing Tracker**” we will ensure that all applications and notices are submitted and approved prior to construction, pressure test and commissioning. In addition, Eclipse has developed a “**Kermit Data Grab Program**” to verify that the information submitted for your company is being recorded and updated in the OGC's Kermit system.

Complete and Submit all Applications and Notices as Required

Eclipse will submit all applications and notices required for a typical wellsite tie-in. Applications and Notices for the wellsite would normally include:

- ☒ Notice of Intent (Schedule1 as required)
- ☒ Notice of Construction Start
- ☒ Notice of Pressure Test
- ☒ Leave to Open
- ☒ As-builts

Cost Management

Costs for each well tie-in project will be on a previously approved basis. This will allow your company to budget accurately for each project with the assurance that the regulatory costs will be identical for each well tie-in.

Eclipse provides a 100% guarantee on *all* our services
